

✓ **TOUCHSCREENS VS PROJECTORS**

- ❖ Brighter
- ❖ Higher definition
- ❖ Do not compete with sunlight like projectors
- ❖ No drivers or calibration
- ❖ Aesthetically pleasing
- ❖ Much longer life
- ❖ **No lamp bulbs & filter to replace**

✓ **RETURN OF YOUR INVESTMENT**

Projectors last approx. 2 years in which time filters will need to be cleaned annually and lamps replaced up to three times.

✓ **WHY TOUCHSCREENS OVER NON-TOUCH?**

Today's society is indoctrinated with touch due to smart device such as phones and tablets with powerhouses such as Microsoft developing software with touch as the foundation.

✓ **CLASSROOMS AND BOARDROOMS NEED TO BE FLEXIBLE**

With touch you can present from the front, rear or sitting down with a keyboard and mouse.

✓ **EVERYONE RESPONDS TO THE PRESENTATION OF INFORMATION DIFFERENTLY**

A touchscreen engages your audience on multiple levels, including visual and interactive.
